

# Roofing Panel | Extraordinary Design Appeal and Cost Effectiveness

## SNAP LOK | Green roofing solution

WESTMAN Steel's new Snap-Lok pre-painted metal roof system distinguishes itself from the competition with its stunning aesthetic appeal and cost effectiveness.

Incredibly strong, impressively durable, and highly sustainable – WESTMAN Steel's Snap-Lok system gives homeowners a unique roofing solution that enhances their homes' appeal, increases home value, and has a long service life.

Made of steel, the Snap-Lok system will not shrink, crack, erode, or deteriorate over years of service. Plus, with steel as the most recycled material in the world, Snap-Lok roofs are the greener alternative to many conventional roofing materials. With low maintenance steel and a diverse selection of profiles and colours, Snap-Lok roof systems exceed customer expectations for residential & commercial steel roofing products.

## INSTALLATION EFFICIENCY | Quick and easy installation

Snap-Lok roofing panels are factory produced on full-sized, roll formers, which results in the production of a superior panel. Our new panel design offers a bolder, stronger rib that purposefully has a flat crown on the top of the main rib to ensure easy installation of trims – every time.

Panels have pre-punched fastener slots to allow for quick and easy installation. For a more contemporary appearance, Snap-Lok offers a truly hidden fastener panel.

## STRENGTH AND DURABILITY | Longevity and cost effectiveness

### Weight

Lighter weight steel is ideal for new and retrofit roofing applications. Structural cost savings is significant when compared to traditional, heavy weight alternatives.

### Fire Resistance

Steel does not burn and will not spread fire, offering protection from external hazards such as windblown sparks.

### Wind Resistance

Properly installed steel panels withstand wind and storms and do not need periodic replacement.

### Water Absorption

Improved anti-siphon rib protects against the heaviest rainfall. A properly installed Snap-Lok steel roof does not absorb water or moisture under most severe weather conditions.

### Snow & Ice Shedding

Snap-Lok steel readily sheds snow and ice, which means little maintenance for homeowners.

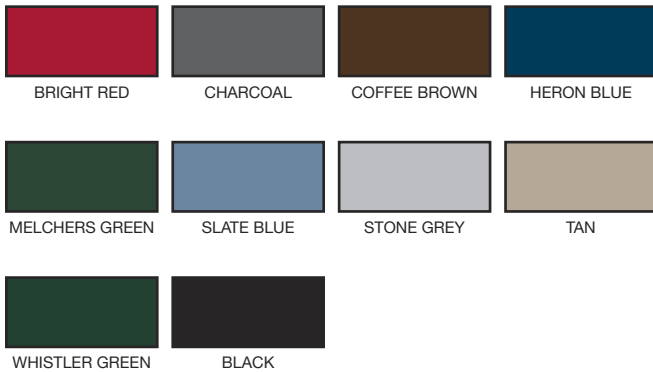

### Sound Deadening

Rain noise on a properly installed steel roof is not a factor.

# Roofing Panel | Extraordinary Design Appeal and Cost Effectiveness

## Snap-Lok | It's all about aesthetics

In 26 gauge, Snap-Lok offers 10 standard colours  
NEW! Whistler Green colour added for 2010

Custom colours and gauges are also available on a project by project basis.

## Lasting Protection | Re-coatability

Colour of pre-painted Snap-Lok steel roofs may be changed for a custom, more coordinated system with new colour schemes of siding or trim. Re-painting may also lengthen the life cycle of the steel roof resulting in a positive influence on long-term life cycle costs.

## Environmentally Friendly | Efficient and sustainable

A steel roof is recyclable and today's steel contains a high proportion of reclaimed steel already, making steel roofing one of most environmentally friendly solutions a homeowner can make. Plus, with special paints, a steel roof may be made to reflect heat in warmer climates resulting in cooling costs.

Result... Steel is the new green.

## Snap-Lok | Quality control

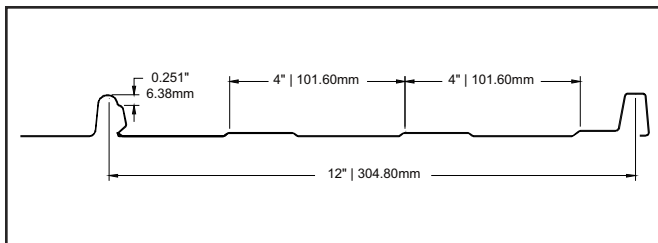

Factory produced in a controlled environment.

Protective tape on overlap for shipping protection.

## Snap-Lok | Guarantee to last

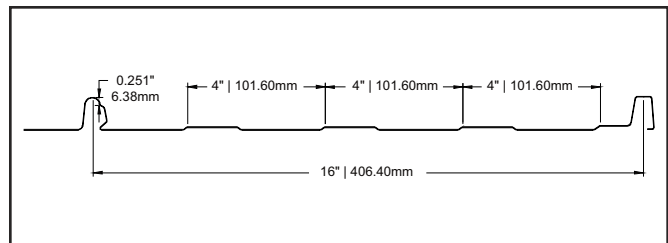

WESTMAN STEEL provides a limited 40 year paint warranty on all Snap-Lok panels.
